Q. Implement following:

A. WAP will demonstrate various HTML tags and anchor control tag.
B. WAP will demonstrate the table tag.

1. **Task to be done:**
   a. Open a text editor, such as Visual Studio Code or Sublime Text, and begin writing HTML code. Start with the basic structure, including <!DOCTYPE html>, <html> </html>, <head> </head>, and <body> </body>.
   b. The use of tables in the web has become more popular recently because of the amazing HTML table tags that make it easier to create and design them. To create a table in HTML you will need to use tags. The most important one is the <table> tag which is the main container of the table. It shows where the table will begin and where it ends.

2. **Code for experiment/practical:**
