Aim:
Implementation of Dashboard in Tableau

Objective:
To design and implement interactive, visually rich, and insightful reports in Tableau that allow users to analyze data effectively, identify patterns and trends, and make informed business decisions.

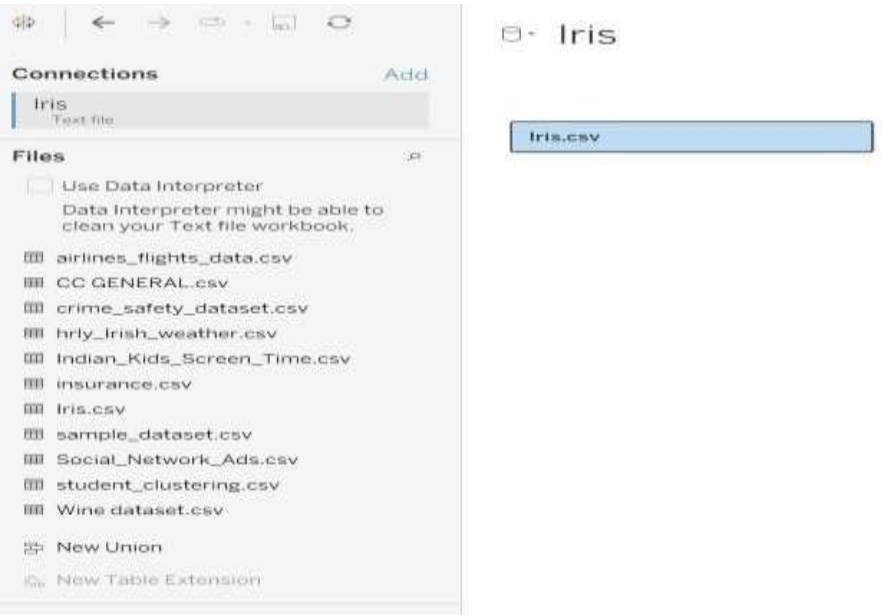
Task to be done:

- Define the purpose of the report (e.g., sales analysis, customer behavior, regional trends).
- Collect and clean the dataset to be used in Tableau.
- Connect Tableau to the data source (Excel, CSV, SQL, etc.).
- Design data visualizations (charts, graphs, maps, dashboards).
- Apply filters, parameters, and calculated fields for interactivity.
- Build dashboards by combining multiple worksheets.
- Add formatting, tooltips, and legends for better readability.

Practical Implementation:

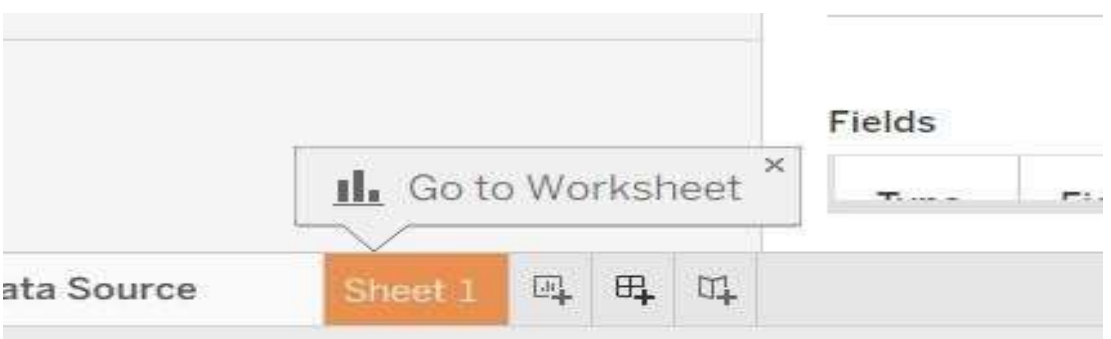
- Understand Requirements – Identify the goals of the report and KPIs.
- Prepare Data – Collect dataset, remove errors, and clean it.

- **Connect to Data in Tableau** – Open Tableau → Select data source (Excel/CSV/SQL) → Import data.

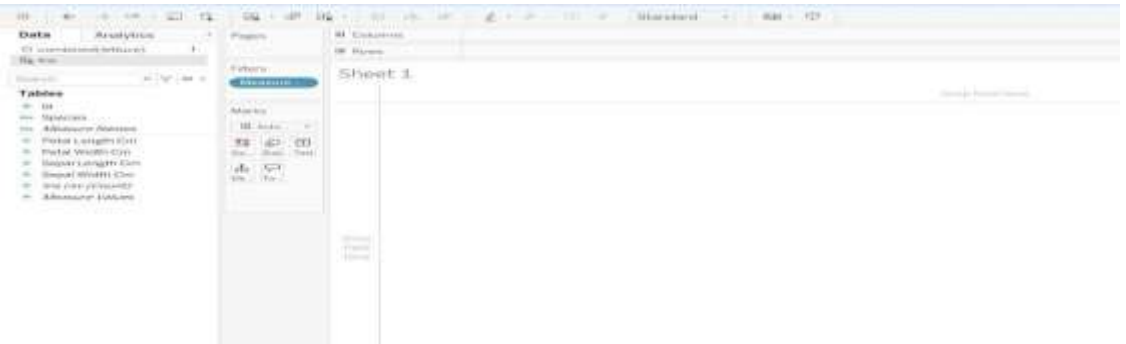


- **Data Exploration** – Check data fields, data types, and create calculated fields if needed.

- **Create Worksheets** – Drag fields to rows/columns → Build visuals like bar chart, line chart, pie chart, etc.



- **Worksheet overview :**



- **Design Dashboard** – Combine worksheets into one dashboard → Arrange charts → Add filters and legends.
- **Validation** – Verify data accuracy and interactivity.
- **Publish/Share Report** – Export as PDF or publish on Tableau Public/Server.

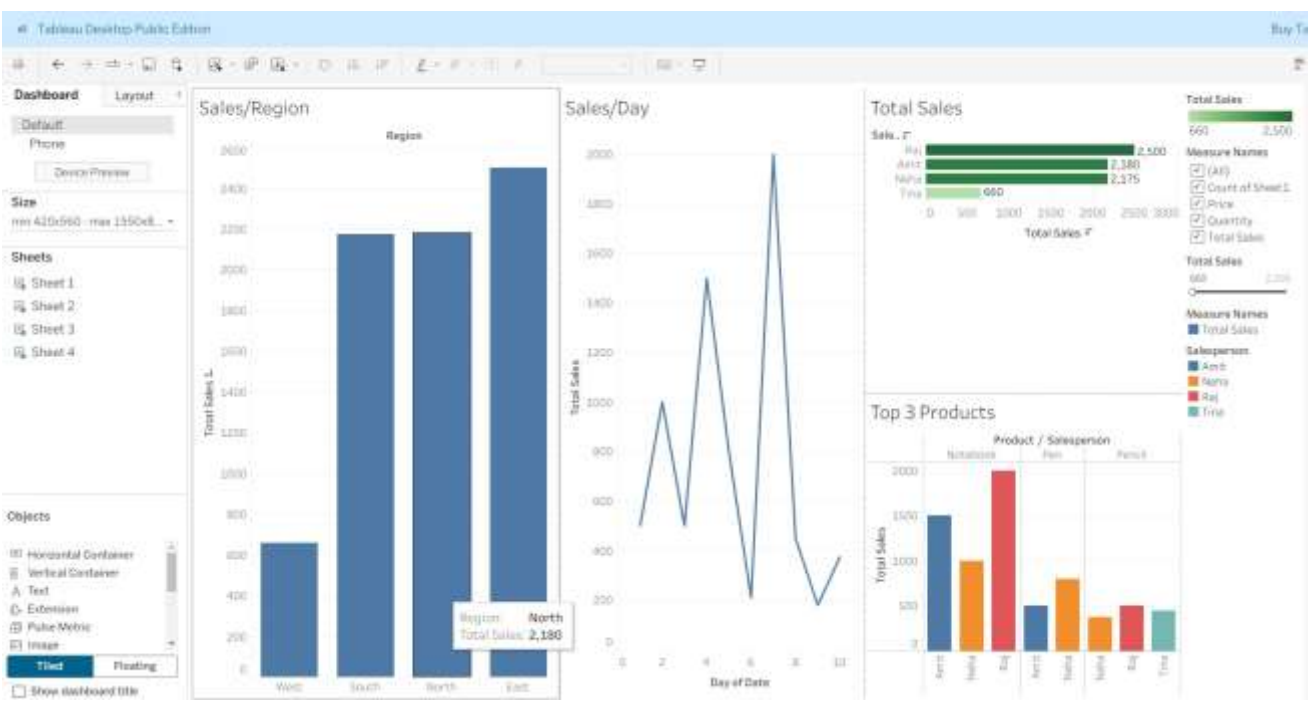
Dashboard Output



- Learning Outcome

1. Understand the process of creating reports in Tableau.
2. Connect Tableau with different types of data sources.
3. Create charts and graphs (bar chart, line chart, pie chart, etc.).
4. Apply filters, parameters, and tooltips for better analysis.
