1. Aim of the practical: Process and job scheduling commands like ps, stop, kill, fb, bgcrontab, cron etc.

2. Objective: **Automate Task Scheduling**: Schedule the execution of the script.sh located in the /home/aaryaman/ directory at 17:00 (5:00 PM) daily to automate repetitive tasks.

Simplify User-specific Management: Ensure the cron job runs under the correct user (aaryaman) by updating the directory path to reflect the current user's home environment.

Maintain Efficient System Operation: Guarantee timely execution of critical scripts without manual intervention, improving system efficiency and task management.

3. Hardware and Software Requirements:

Computer System: Host system running virtualization software.

Operating System: OS on the virtual machine (e.g., Fedora).

4. Commands/Steps:

Step-1: ps:- Used to check Running Processes

```
asr@fedora:~$ ps
    PID TTY          TIME CMD
   2839 pts/0    00:00:00 bash
   3080 pts/0    00:00:00 ps
asr@fedora:~$
```

Step-2: ps aux used to view Detailed Process Information

```
asr@fedora:~$ ps aux
USER         PID %CPU %MEM    VSZ   RSS TTY      STAT START   TIME COMMAND
root           1  0.2  1.2  63528 26040 ?        Ss   22:24   0:03 /usr/lib/syst
root           2  0.0  0.0      0     0 ?        S    22:24   0:00 [kthreadd]
root           3  0.0  0.0      0     0 ?        S    22:24   0:00 [pool_workque

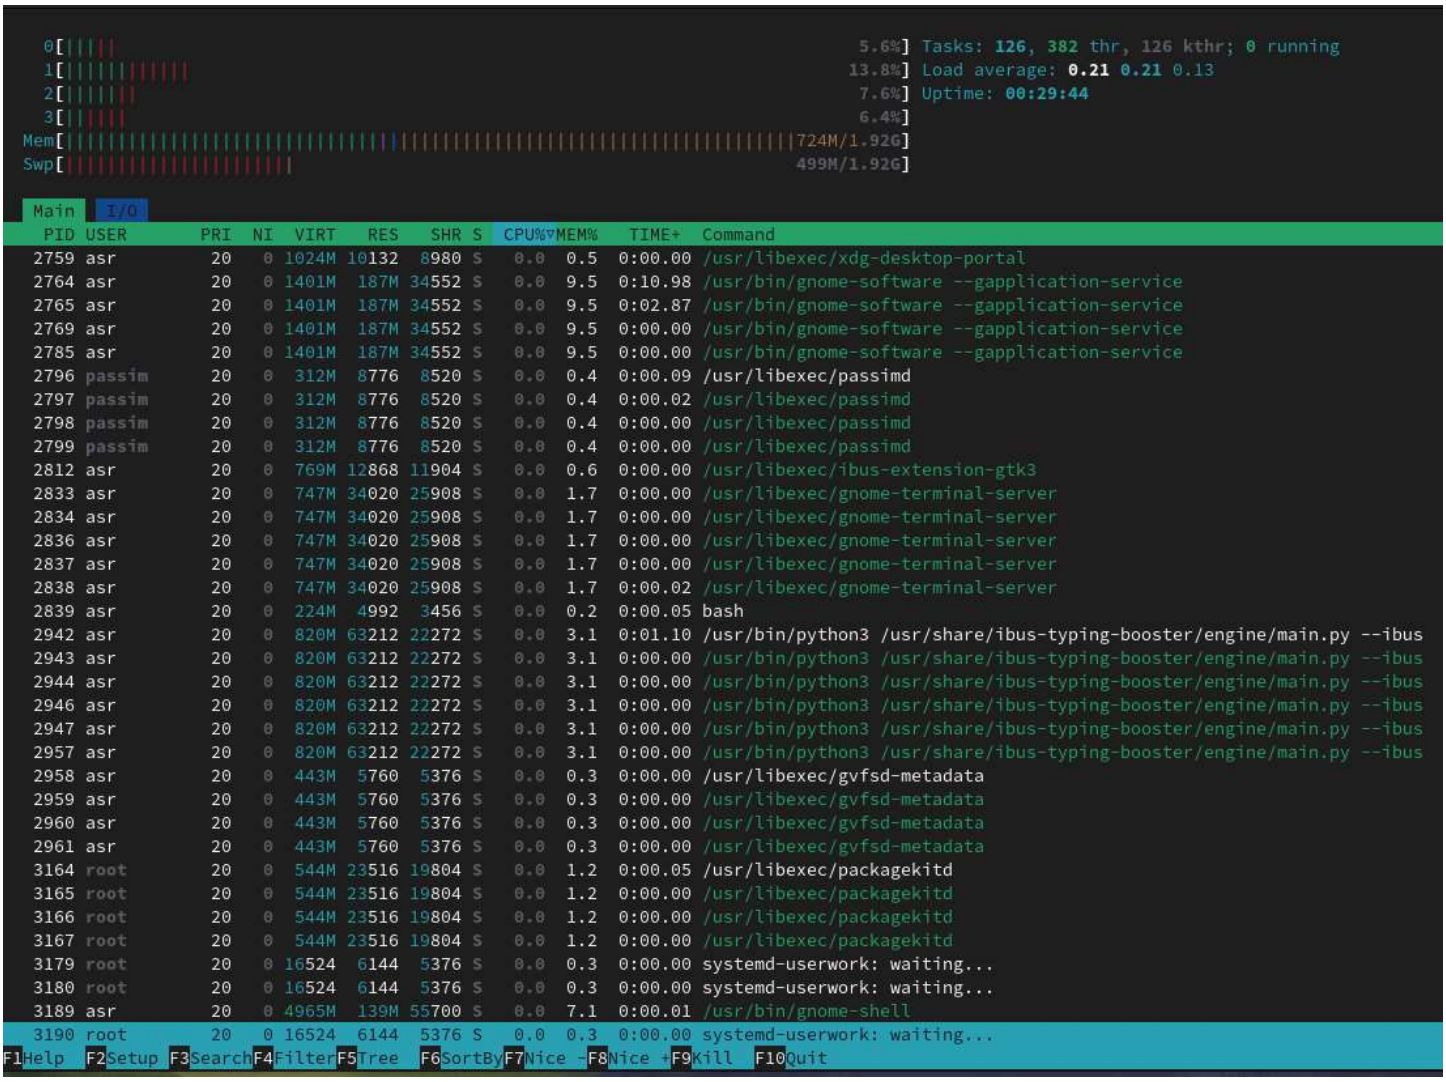
  htop-3.3.0-3.fc40.x86_64           hwloc-libs-2.11.1-1.fc40.x86_64

Complete!
```

Step-4: We used (Htop) command to see all the running tasks.



Step-5: Opened a new terminal and killed it using F9 or we can kill using kill <process id>

Step-6: Now installed Crontab (crontab -e)

```
asr@fedora:~$ crontab -e
bash: crontab: command not found...
Install package 'cronie' to provide command 'crontab'? [N/y] y

 * Waiting in queue...
 * Loading list of packages....
The following packages have to be installed:
 cronie-1.7.2-1.fc40.x86_64     Cron daemon for executing programs at set times
 cronie-anacron-1.7.2-1.fc40.x86_64     Utility for running regular jobs
 crontabs-1.11^20190603git9e74f2d-3.fc40.noarch Root crontab files used to schedule the execution of programs
Proceed with changes? [N/y] y

```

Step-7: Now Made new executable file for making crontab use.

```
asr@fedora:~$ touch ~/script.sh
asr@fedora:~$ vim ~/script.sh
asr@fedora:~$ chmod +x ~/script.sh
asr@fedora:~$
```

Step-8: Now added this command

```
0 17 * * * /home/asr/script.sh
```

Step-9: Verifying the crontab

```
asr@fedora:~$ crontab -l
0 17 * * * /home/aaryaman,a/script.sh
```

• Every day at 5:00 PM, the cron daemon (a background service that runs scheduled tasks) will execute the command /home/aaryaman/script.sh. This will run the script you created, which prints "Hello!" to the console.

5. Learning outcomes (What I have learned):

1. Learned to understand process monitoring
2. Learned to understand process control
3. Learned to understand task scheduling

Evaluation Grid (To be created as per the SOP and Assessment guidelines by the faculty):

Sr. No.	Parameters	Marks Obtained	Maximum Marks
1.	Worksheet		8 Marks
2.	Viva		10 Marks
3.	Simulation		12 Marks
	Total		30 Marks
